

## Radiochemistry

SRC Environmental Analytical Laboratories offers one of the most complete arrays of analytical services in Canada within a single facility. We provide environmental testing for companies in mining, oil and gas, industry and agriculture, as well as consultants, government agencies and research organizations.

The Saskatchewan Research Council is a leader in radiochemistry. We offer special and routine radiochemistry analysis, including:

- Alpha spectroscopy
- Beta Counting
- Gamma spectroscopy
- Delayed neutron counting
- Neutron activation
- Naturally Occurring Radioactive Materials (NORM)
- Agricultural products for export
- Radiological guidelines for drinking water
- Special radioactivity measurements

### Customer Care

Contact us regarding your analytical requirements. We can recommend an optimal analytical package for your samples and ensure you have the proper bottles, sample volumes and preservatives. Sample containers and preservatives can be obtained at no cost.

We have extensive experience analyzing a wide range of sample matrices, including:

- Ground and surface water
- Mine effluent and wastewater
- Soil
- Sludge
- Multiphase samples
- Air
- Biota
- Vegetation
- Building debris
- Mixed and hazardous waste

### Reliable Service

- Fast turnaround time
- Direct contact with experts and lab supervisors
- Convenient online results portal

### Added Value

- No extra costs for sample containers or kits
- No extra costs for sample handling and storage

### Quality at Every Stage

- Technical experts with many years of experience
- Comprehensive quality control and quality assurance program
